PROFESSIONAL SUMMARY

Passionate Unity Developer and Gameplay Programmer currently pursuing a Game Programming degree at FutureGames, Warsaw. Experienced in designing and implementing modular gameplay systems in C#, including data-driven architectures, enemy AI behaviors, and player mechanics. Collaborative team player with hands-on internship experience in an agile Scrum environment, building polished game demos from concept to completion.

TECHNICAL SKILLS

Engine & Tools: Unity, Unreal, Git, Perforce

Languages: C#, C++

Gameplay Systems: Combat Logic, Enemy AI & Behaviors, Player Mechanics, Gameplay Logics

Architecture: Modular Gameplay Systems, Data-Driven Design, Object-Oriented Programming

Methodology: Scrum / Agile, Cross-discipline Team Collaboration

PROFESSIONAL EXPERIENCE

Secernate Games Private Limited — *Unity Developer — Intern* Jul 2024 – Sep 2024

- Collaborated within a cross-functional team using Scrum methodology to deliver a complete game demo on schedule.
- Communicated daily with designers to align on gameplay requirements, translating design intent into working Unity implementations.
- Contributed to core gameplay programming tasks including player mechanics and enemy behavior scripting in C#.
- Participated in sprint planning, stand-ups, and retrospectives, developing strong agile workflow habits.

EDUCATION

FutureGames Sep 2025 – Dec 2027
Game Programming | Warsaw, Poland

Backstage Pass Institute of Technology and Gaming Apr 2020 – Jun 2024
B.Sc. (Hons) in Computer Science & Game Development | Hyderabad, India

ACADEMIC PROJECTS

Greg the Frog — *GP1 Curriculum Project, FutureGames* futuregames.itch.io/greg-the-frog

- Implemented frog rescue and collection systems, including follower attachment and progression mechanics.
- Developed gameplay systems such as checkpoints, player lives, damage/death handling, and progression tracking.
- Created data-driven management systems for frog types and rescue statistics across multiple levels.
- Built an audio management system for music transitions and gameplay sound effects.
- Collaborated in an Agile, multidisciplinary team using Unity, C#, Jira, Miro and version control GitHub.

Shaperfolk— *GP2 Curriculum Project, FutureGames* <https://futuregames.itch.io/shaperfolk>

- Developed a modular, data-driven tower defense framework supporting configurable tower stats, targeting modes, and combat behaviors.
- Implemented multiple attack systems including projectile, melee, AOE, mortar, and status-effect mechanics using extensible architecture.
- Designed and built the tower fusion system with validation logic and dynamic stat upgrades.
- Collaborated with designers to create scalable gameplay tools and improve iteration speed.
- Applied Agile workflows, Jira tracking, and iterative testing to deliver a polished mobile game experience.

SheepKeeper— *GP3 Curriculum Project, FutureGames* <https://futuregames.itch.io/sheepkeeper>

- Developed a modular Sheep Behaviour System managing state-driven sheep behaviours and gameplay responses.
- Implemented Sheep Flocking AI to coordinate group movement and create cohesive flock behaviour.
- Developed Leader Behaviour to influence flock navigation and sheep responses during herding.
- Designed and implemented a reusable Sheep Ability System supporting gameplay interactions and varied sheep behaviours.
- Implemented obstacle avoidance and environmental hazards affecting sheep navigation and gameplay.
- Implemented post-processing effects to support gameplay feedback and the game's visual presentation.
- Collaborated as part of a 12-person multidisciplinary team, working closely with designers to iterate on gameplay, AI behaviour, and level interactions.
